

APPENDIX B

PROGRAMS SOURCES LISTING

B.1 VAX Fortran

PROGRAM PBVAX

C
C LOGICAL FLAGS:
C NOTF=LINE NOT FOUND LEND=AT END OF LINE
C PRFL=PROFILE PLOT STOP=STOP PLOTTING
C
C INTEGER FLAGS:
C IERR=ERROR CODE JJ=REC'D IN BUF
C LINE= LINE PLOTTED II=BUF WORD PTR
C LASTR=LAST REC'D OF FILE LASTL=LAST LINE
C
C ERROR CODES:
C 0=NO ERROR 1=ACTION PT FLG ERR
C 2=LINE EXCEEDS LAST 3=EMPTY LINE
C
C RBUF CONTAINS CURRENT DIGITAL FILE RECORD.
C
C SUBROUTINES USED: PBTMT.
C PBTIO.
C PBTMNF.
C PBSRH.
C PBPLTL.
C RFIL.
C *****
C SUBROUTINE PBTMT() - DEFENSE MAPPING AGENCY, WASHINGTON D.C.
C
C PURPOSE: ASK THE USER TO ENTER THE MAP SCALE TO BE PLOTTED. IN
C ADDITION, FOR PROFILES, IT ASK FOR THE PROFILE STEP-
C OVER AMOUNT AND THE ELEVATION EXAGGERATION DESIRED.
C THE MODEL TO TABLE SCALE IS CALCULATED AND DISPLAYED
C TO THE OPERATOR.
C
C FORTRAN CALLING PROCEDURE:
C
C CALL PBTMT(STOP,PRFL)
C
C WHERE: STOP - LOGICAL, RETURNED AS TRUE IF USER ENTER A
C CONTROL Z AS A RESPONSE.
C PRFL- IS SET TO BE TRUE BY CALLER (PB) IF THE FILE
C TO BE PLOTTED IS A PROFILE FILE.
C *****
C SUBROUTINE PBTIO() - DEFENSE MAPPING AGENCY, WASHINGTON D.C.
C

C PURPOSE: ASK THE USER TO ENTER INFORMATION WHICH GOVERNS THE
C LOCATION AND ORIENTATION OF THE PLOT ON THE PLOT-
C TING TABLE. THE LOCATION OF MODEL ORIGIN RELATIVE
C TO THE TABLE INDEX IS CALCULATED AND DISPLAYED.

C FORTRAN CALLING PROCEDURE:

C CALL PBTIO(STOP)

C WHERE: STOP - LOGICAL, RETURNED AS TRUE IF USER ENTER A
C CNTRL Z AS A RESPONSE.

C *****

C SUBROUTINE PBTRNF() - DEFENSE MAPPING AGENCY, WASHINGTON D.C.

C PURPOSE: USES THE PARAMETER DETERMINED BY PBTIO AND PBTMT,
C ALONG WITH XMBAR AND YMBAR FROM THE DIGITAL RECORDING
C FILE TO COMPUTE THE TABLES COORDINATES CORRESPONDING
C TO THE INPUT MODEL COORDINATES.

C FORTRAN CALLING PROCEDURE:

C CALL PBTRNF(X,Y)

C WHERE: X,Y AT ENTRY ARE THE MODEL COORDINATES AND AT EXIST
C ARE TABLE COORDINATES Y.

C *****

C SUBROUTINE PBSRH() - DEFENSE MAPPING AGENCY, WASHINGTON D.C.

C PURPOSE: SEARCHES THE DIGITAL RECORDING FILE FOR THE START OF
C THE NEXT LINE TO BE PLOTTED. KEEPS A POINTER WHERE OF
C WHERE THE LINE IS FOUND, AND STARTS THE NEXT SEARCH
C FROM THIS POINT.

C FORTRAN CALLING PROCEDURE:

C CALL PBSRH

C *****

C SUBROUTINE PBPLTL() - DEFENSE MAPPING AGENCY, WASHINGTON D.C.

C PURPOSE: CONTROLS THE PLOTTING OF A LINE. FOLLOWING THE LINE
C THROUGH THE FILE AND CORRECTLY HANDLING PEN UPS AND
C DELETED POINTS, AND MONITORING THE TERMINAL FOR THE
C ENTRY OF A CNTRL Z. THE PEN IS PUT UP AND RETURN
C MADE WHEN THE LINE ENDS.

C FORTRAN CALLING PROCEDURE:

C CALL PBPLTL

```

C *****
C SUBROUTINE RFIL() - DEFENSE MAPPING AGENCY, WASHINGTON D.C.
C
C PURPOSE: READS A RECORD FROM THE FILE AND CHECKS THE LINE
C POINTERS FOR CONSISTENCY. INCONSISTENCY IS REPORTED
C TO THE USER. FOR SERIOUS ERRORS SUCH AS REQUESTING A
C RECORD OUTSIDE THE FILE, THE CALLING PROGRAM IS
C NOTIFIED VIA A FLAG.
C
C FORTRAN CALLING PROCEDURE:
C
C     CALL RFIL(J,LERR)
C
C     WHERE:  J NUMBER OF RECORD TO BE READ.
C            LERR SET TRUE IS SERIOUS PROBLEM WITH RECORD.
C *****
C     LANGUAGE:    VAX FORTRAN version 5.0.

B.2.2 Listing of Program DSCMODEL

```

PROGRAM dscMODEL
C
C This program is for creating the models for compilation on the
C DSC's the data is taken from the output of a GIANT run and the
C parameter file MODEL.DAT. If you NEED to change a value from
C MODEL.DAT file, you can do it by editing and renaming this file
C before running this program.
C
C FILE MANAGEMENT:
C
C LOGICAL NAME          FILE
C     1                  gxxxx.dat
C     2                  model.in
C     3                  obj.out
C     4                  img.dat
C     5                  model.dat
C
C SUBROUTINES USED: BEEP.
C                   MODEL.
